

Don't let 11,461 gallons go down the drain in vain.

Save water, money and time with hot water in an instant.

The average home wastes over 31 gallons a day and over 11,000 gallons a year waiting for hot water. That's not just wasted water, that's wasted money and wasted time. But you don't have to take it anymore.

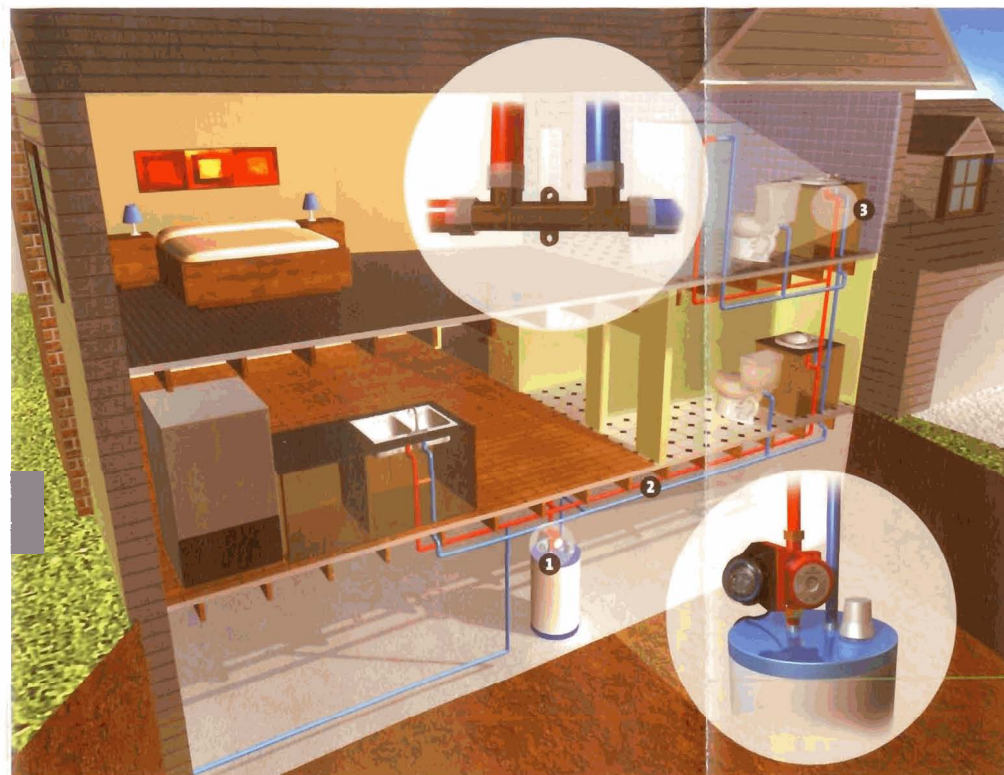

The Grundfos Comfort System pumps hot water through your existing pipes, so hot water is never wasted and comfortable water is always at hand—in an instant.

With Grundfos, you save water from needless waste, you save money on your water bill and you save time waiting for hot water.

Saving water and money has never felt so good.

**Yes, hot water recirculation works.
No, it's not hard work.**

The Grundfos Comfort System is really quite simple. Unused hot water is recirculated back to the hot water heater by using the cold water line as the return line. A pump forces

THE GRUNDFOS COMFORT SYSTEM

1 pump: The Comfort System is installed on your hot water heater to help pull "recycled" water back to the hot water heater to be reheated and recirculated.

2 pipes: Hot water is always at hand because it continuously circulates from the hot water line to the cold water line and back to the hot water heater.

3 valve: Placed under the sink farthest from the hot water heater, the valve helps regulate the flow from the hot water line to the cold water line.

the unused water back into the cold water supply line at a slow and steady pace. So water is neither too cold nor too hot—it's always just right.

**Don't wait for hot water,
don't wait for installation.**

Installation is easy. There's no return line to install and no electricity required under the sink.

Your contractor just installs the pump, a valve and a few accessories. Plus, the system uses less energy than a 25-watt light bulb.

**How much is 11,461
gallons of water?
Enough to fill a 14' x 30'
swimming pool.**
